TP SHUNTING RADIO

Tait TP(s) The Rugged IP67 Radio with Specific Shunting Functionality

The Tait Shunting Radio is devised specifically for use in the Rail Shunting Environment.

The application can be added to any Tait TP radio and enables the radio to be used as a "dead mans lock"- activated at a key press and transmitting an audible tone to other radios on the channel whilst the button is pressed ..

Designed specifically for shunting environments it brings an additional capability to a rugged and feature rich radio.....

Servicom and Tait collaborated to bring a communications solution for the shunting environment, where health and safety of employees is of paramount importance....

THE POWER TO COMMUNICATE

TP SHUNTING RADIO

Tait TP The Rugged IP67 Radio with Specific Shunting Functionality

The application can be added to any Tait TP radio and enables the radio to be used as a “dead mans switch”- activated at a key press and transmitting an audible alarm to other radios on the channel whilst the button is pressed.....

Designed specifically for shunting environments it brings an additional capability to a rugged and feature rich radio.....and is a feature that can be utilised in environments such as building sites, transport yards etc...

An audible tone can be heard by radio users whilst the button is pressed, this stops as soon as button is released
